

## Two Piece Corrugated Liners

- RipplePak has been helping home food delivery companies supply great recipes with ultra-**fresh** ingredients to people's doorsteps
- This 2-piece double wall corrugated Insert when used with RipplePak's finger packs will provide for an extended constant internal temperature that is a requirement of home food delivery companies to keep food fresh for a predetermined amount of time preventing perishable food products from deteriorating.
- The Inserts protect the contents against external temperature penetration. They are placed within the cardboard box in which the temperature sensitive products are shipped. The Insert covers all 6 sides and seals the contents within the box which itself is then closed & sealed for shipment. This solution assists with maintaining the desired temperature within the carton from origin, during transportation until it is opened at the destination.
