

# Insulated Thermal Pallet Covers

- ▶ When products are transported there is not always the facility to place the goods undercover for the entire period, and many products are susceptible to damage from heat extremes and direct sunlight.
- ▶ Thermal pallet covers may be used on cargo pallets for temperature-sensitive products to provide a radiant barrier for short-term protection against low duration exposure to extreme heat. They are valuable as a precaution if products are temporarily exposed to direct sunlight, for instance, on the apron at the airport or while waiting to be loaded on a truck. They protect the products from solar spikes and variations in temperature, helping to maintain quality and freshness.
- ▶ Pricing available upon request
- ▶ Custom sizes available

# Insulated Thermal Pallet Cover Benefits

- **Reduces effect of dramatic temperature spikes.**
- **Effective moisture and vapor barrier.**
- **Made with 3/16" bubble laminated to metalized film with an inside liner.**
- **Metalized film provides light, solar radiation & UV protection that keeps out over 95% of radiant heat.**
- **Protects the cargo from extremes of both heat and cold**
- **Provides both cushioning and protection.**
- **Easy to apply, covers top and sides of pallet and secured with stretch wrap encasing pallets of perishables for short-term shipments.**
- **Very light weight, arrives folded, saving space**
- **Pricing available upon request.**
